Message from the Guest Editor

Agricultural activities from animal production and crop production are becoming increasingly scrutinized due to their impacts on the atmosphere. Agricultural contributions to air quality issues include greenhouse gases (methane and nitrous oxide), odor compounds (several classes of volatile organic compounds), the primary production of particulate matter from tillage and harvesting, dust and bioaerosols from animal housing, combustion aerosols from controlled burns, and precursor emissions, which can lead to secondary atmospheric chemistry and regional deposition effects (i.e., ammonia, amines, sulfur compounds, and nitric oxide). Emission inventories and models are in many ways incomplete at local, national, and international levels, making it difficult to test mitigation strategies in a comprehensive way. Measurement- and modeling-oriented papers that examine emissions from agricultural sources, the factors governing the emission process, mitigation methods, and economic feasibility, are encouraged.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
