Message from the Guest Editors

Dear Colleagues,

Over the last decades we have faced the imperative need for long-term sustainable farming methods and systems able to decrease environmental pollution and preserve plant health and biodiversity. New resilient genetic resources, organic inputs, and friendly practices are essential to mitigate the changing climatic environment and its associated negative effects. Organic fertilizers significantly increase vegetable and fruit yield and quality, known for their ability to improve metabolic pathways for enhanced metabolite synthesis. On the other hand, their inappropriate application may cause serious environmental risks.

With this Special Issue of *Agronomy*, we seek integrative studies that provide insights into the influence of different organic fertilizer applications on the yield and quality of diverse vegetables and fruit species, as well as reviews that offer original perspectives on the exploration of organic fertilization benefits and risks.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
