Message from the Guest Editor

Dear Colleagues,

Climate change is a big issue affecting crop production worldwide, and *Brassica* crops are currently facing severe challenges caused by various abiotic stressors, including drought, heat, frost, salinity stresses, and limited nutritional use efficiency, etc. Nowadays, much of the current research is focused on the response to a single stressor under controlled environments and does not reflect actual on-paddock exposure to multiple stressors. Heat and drought stress, for example, is increasing during the growing season due to climate change, and warm winters and spring heat waves are promoting new interactions between multiple stressors. This Special Issue will incorporate studies from molecular laboratories to field trials, address abiotic stress tolerance in *Brassica* species for a better understanding of current phenomics and genomics achievements, and facilitate breeding in *Brassica* species.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
