Message from the Guest Editors

Dear Colleagues,

Vegetables consumption has been a growing trend in the food world for years because they are rich in micronutrients and health-promoting phytochemicals. Furthermore, changes in the world's climate, including rising temperatures and water shortages, will bring about major shifts in food production, which will lead to modifications in most of the current food production strategies. In this context, producers of vegetable crops are continually developing new innovative agricultural practices with the aim of achieving more sustainable and efficient production to overcome specific cultivation limitations, to reduce any related environmental impacts, including those related to climate change, and to adjust to new market requirements. It is for this reason that it is necessary to update our scientific knowledge of vegetable crop production. For this Special Issue, we welcome original research articles on any innovative agricultural practice that targets sustainable and efficient vegetable crop production in the context of the challenges that the world currently faces.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
