Deadline for manuscript  
submissions:

**15 January 2025**

### Message from the Guest Editors

Dear Colleagues,

In drought-prone areas, such as arid and semi-arid regions, the use of irrigation is a practice that can maximize agricultural crop production. However, due to the scarcity and expensiveness of water in these regions, it is necessary to plan and adopt management that enables the efficient use and adequate management of local water resources. In planning, the choice of irrigation method is essential for the success of the agricultural enterprise, as it can influence the productive responses of crops. Factors such as the type of soil, relief, local climatic conditions, water availability, plant species and the management adopted in the production system must be considered at this stage.

With this Special Issue of *Agronomy*, we seek unpublished studies that show the productive responses of irrigated crops in a semi-arid environment. Furthermore, we encourage contributions that address the influence of irrigation methods on the productive performance of plant species, highlighting the use of resilient practices, jointly or not, that maximize agricultural production, as well as minimizing the adverse effects of these environments.

## Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
