Message from the Guest Editor

Dear colleagues,

Weeds are one of the most important biological constraints to crop production. They affect crop yield by competing with crops for sunlight, nutrients, water and space. Herbicides are used globally to manage weeds. However, their injudicious use has resulted in the evolution of herbicide-resistant weed biotypes, weed species population shifts and increased costs of herbicides. Globally, >500 unique cases of herbicide-resistant weeds have been reported, suggesting that there is a need to develop ecologically sustainable weed management practices in different cropping systems so that herbicide use can sustain for a long time. These practices should also save natural resources for the future. Some of the sustainable weed management practices are: cultural, mechanical and biological.

This special issue will focus on “Ecologically sustainable weed management in cropping systems”. We welcome novel research, reviews, short communications and opinions covering all related topics.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
