Deadline for manuscript
submissions:

closed (20 February 2021)

Message from the Guest Editors

Grain legumes deliver multiple ecosystem services such as protein-based food and feed and the sustainability of agroecosystems through their unique ability to fix atmospheric dinitrogen (N₂) via symbiosis with soil rhizobia. However, in the current and future context of climate change, including increases in temperature, drought period frequency and intensity, salinity, etc., their productivity is endangered. In order to meet future food and feed needs, it is essential to enhance their resilience to individual or combined abiotic stresses. Please share your success stories from research in legume improvement for adaptation to climate change in this Special Issue.

Submissions on (but not limited to) the following topics are invited: 1) Legume breeding for abiotic stress tolerance; 2) genetics and translational genomics of abiotic stress tolerance ; 3) identification of morphological and physiological traits leading to legume resilience; 4) high-throughput phenotyping methods for the screening of large legume collections.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
