Message from the Guest Editor

Industrial crops have significantly improved the quality of human life. However, the changing climate and declining soil quality have become major threats to the sustainability of industrial crops, resulting in lower incomes for families, regions, and even countries. In this regard, industrial crops, including oil crops, fiber crops, medicinal plants, and other important economic crops, such as tobacco, will increasingly become an important topic of research. This Special Issue will consider any aspect of the comprehensive studies of industrial crops, including but not limited to the agronomy, physiology, methods, genetics, and breeding of industrial crops. Studies on the growth and performance of industrial crops under stress, especially saline–alkali stress, are particularly encouraged. In this Special Issue, we aim to exchange knowledge on any aspect related to the yield, quality, and abiotic stress of industrial crops, thus facilitating their increased adoption and utilization in order to address the challenges faced by humans against the background of a changing climate.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
