Message from the Guest Editors

Dear Colleagues,

Herbaceous perennials include important economic crops, herbages, and popular flowering perennials. As herbaceous perennials persist for years, they are more vulnerable to soil-borne diseases caused by bacterial, fungal, viral, and nematode pathogens, in addition to foliage diseases. Developing effective disease-management approaches is based on understanding disease symptoms, progress, and microbial pathogenicity, as well as their epidemiology. On the other hand, the activities of both plant roots and associated microorganisms cause changes in the rhizosphere soil properties, which may potentially contribute to plant health/disease.

The focus of this Special Issue is “Diseases of Herbaceous Plants”. It will entail novel research studies and reviews focusing on all related topics, including the etiology of new diseases, microbial pathogenicity, interaction between pathogens and herbaceous perennials, anti-microbial metabolites/immunity, herbaceous perennial rhizobiomes, breeding for disease resistance, and integrated disease management.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q1 (*Agronomy and Crop Science*)
