Message from the Guest Editor

Dear colleagues,

With the increasingly strict regulations for organic waste management and agricultural fertilizer application has come a growing interest in recovering nutrients from organic waste as bio-based fertilizer products. Nevertheless, challenges remain in improving the economic performance of nutrient recovery technologies and upgrading fertilizer product quality to meet agricultural and societal requirements. Integration of multiple nutrient recovery technologies may allow improving bio-based fertilizer formulations, while reducing overall chemical and energy needs, and hence operational costs. Indeed, nutrient recovery processes are often interdependent, and hence, there is an urgent need for systems-thinking (integration) in the field, thereby considering interactions between unit processes instead of targeting single unit process design. It is in this perspective that this Special Issue welcomes papers on integrated or multiprocess approaches to nutrient recovery from organic waste to recover bio-based fertilizer products that meet the requirements of agriculture and society.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
