Microbes and Functional  
Genomics, Jiangsu Engineering  
and Technology Research Center  
for Microbiology, College of Life  
Sciences, Nanjing Normal  
University, Nanjing 210023, China

Deadline for manuscript  
submissions:

**30 September 2025**

### Message from the Guest Editors

Plants continuously sensing sophisticated stimulates and regulate their physiological state for optimized adaption to the environment. In the long-term coevolution of crops and their environment, they have gradually become united and established profound internal correlations. In recent years, scientists have achieved remarkable advances regarding the molecular mechanisms of crop–environment interactions, but research on their internal correlations, plant protection and agrobiotechnology methods tends to be limited in scope and only address the discovery of resistance genes. We look forward to not only providing an explanation of the functional properties of the molecular interactions between crops and their environment, but also addressing the utilization of crop resources and its effects on the environment.

The aim of this Special Issue is to expand our understanding of molecular advances in crop protection and agrobiotechnology in the utilization of crop resources, which will facilitate plant cultivation, breeding, and utilization to enhance the yield and quality of crops in modern agriculture.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
