Deadline for manuscript
submissions:

28 February 2025

Message from the Guest Editor

Dear Colleagues,

Forage crops are the bedrock of sustainable agriculture. Given the social, environmental, and economic importance of forage across the globe, the nutritive value of forage crops has enormous potential to improve food security and political stability. Forage plants are valuable because they support wild and domesticated herbivores and sustain the delivery of meat, milk, and other commodities. Forage plants contain different quantities of fibre, lignin, minerals, and protein and vary in the proportion of their tissue that can be digested by herbivores. The Special Issue aims to highlight the significance of forage crops in cropping systems, current improvements, and some future directions to improve yield and nutritive value. In this Special Issue, research articles, reviews, and opinion papers addressing forage crops' nutritive value and management, soil-plant interaction, and impact on the environment are welcome.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
