Message from the Guest Editors

Dear colleagues,

The soil organic matter (SOM) comprises approximately 2/3 of the global terrestrial C pool and plays a vital role not only in biological aspects but also in soil fertility and quality. Consequently, the decline of SOM represents one of the most serious threats facing many arable lands of the world. At the same time, human activities cause a net release of CO₂ to the atmosphere of about 800 Gt C per year. In an attempt to reverse this trend, sustainable agriculture is being promoted in a context of a circular economy. During the last decades several organic amendments (e.g. biochar, manure, etc.) have been rediscovered and recognized as an efficient strategy for soil preservation. In addition, they offer a sustainable approach for managing wastes and to produce added value products.

Considering the current trend of fostering a sustainable agriculture and circular economy, this Special Issue seeks to increase the knowledge on the latest advances concerning the application of biochar and other organic amendments in agriculture, as well as for the restoration of degraded soils, covering biological, chemico-physical, biochemical and environmental aspects.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
