Deadline for manuscript
submissions:

closed (30 April 2021)

Message from the Guest Editor

At present, as we realize the complexity of nitrogen fixation processes (especially in symbiotic systems), we can develop new ideas focusing on enhancing the effectiveness of this process, which could result in obtaining higher crop yield and minimizing the negative effects of intensive plant production on the environment.

This Special Issue will focus on recent advances in biological nitrogen fixation, as well as the application of new discoveries and concepts in agronomy. We welcome novel research and reviews covering all related topics, including interactions between plants and their N₂-fixing symbiotic or non-symbiotic prokaryotic partners, biofertilizers containing microorganisms or their metabolites, new cultivation practices developed for plants cooperating with microbial N₂ fixers, or the use of such plants in crop rotation for the improvement of soil parameters.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
