### Message from the Guest Editors

Dear Colleagues,

Agriculture is handed a difficult challenge over the next 20 years. Due to the rapid increase in the world's population, and the current trend suggests that there will be an increased global food demand. Therefore, there is a need to produce more food on the same, or less, cultivated areas. In addition, crop production needs to be achieved in a sustainable way, without polluting the environment, and without reducing farmer incomes. However, projected climate change will increase the vulnerability of agricultural production, with projected impacts being positive or negative depending on the geographical location. The impacts and adaptations have been studied using several methodologies, such as process-based models, agro-ecosystem models, and statistical models based on historical data. This Special Issue welcomes articles, from any agricultural area of the world, and for any cropping system, dealing with impacts and adaptations of climate change. We welcome novel approaches involving different methodologies and assessments.

Dr. Davide Cammarano

## Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
