### Message from the Guest Editor

Dear Colleagues,

Weeds are becoming one of the major biological constraints in modern agriculture. Herbicides are used to manage weeds in different cropping systems; however, there are concerns regarding the development of herbicide resistance in weeds, availability of new broad-spectrum herbicides, environmental pollution, *etc.* Therefore, there is a need to integrate additional weed management tools with herbicide use to achieve sustainable weed control. This special issue brings together the latest research findings related with the role of competitive cultivar, seeding rate or plant density, and row spacing and orientation in managing weeds in different field crops.

## Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
