Deadline for manuscript
submissions:

closed (30 November 2022)

Message from the Guest Editor

We kindly invite you to consider submitting your full paper to this Special Issue covering the following scientific issues:

1. The effect of cultivation practices on crop yields and grain quality;
2. The response of crop yields and grain quality to climate change;
3. Adaptive practices to climate change for high crop yield and grain quality.

The global demand for crop production is expected to roughly double by 2050. Meanwhile, the demand for high grain quality also increases as living standards improve. Therefore, sustainable intensification of cropping systems requires increasing yields as well as high quality. However, climate-related impacts are already reducing crop yields and food quality in some parts of the world. And the risk of yield impacts increases depending on the level of climate change (e.g. CO₂ enrichment, warming, drought, heat). For this Special Issue, we welcome scientific outcomes of research works on coordination of crop yield and quality in the current and future climate scenarios all over the world.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
