Forest Research Institute, ELGO-DIMITRA, Thessaloniki, Greece

Deadline for manuscript submissions:

**closed (31 August 2023)**

### Message from the Guest Editors

Dear Colleagues,

In recent decades, climate change has strongly and directly affected plants and their crops. The rise in temperature in combination with prolonged periods of drought significantly affects crop yields in many parts of the world. This has necessitated the search for more resilient plant varieties that will be able to withstand adverse environmental conditions without compromising the maximum yield. Useful tools for this purpose are the extensive investigations of genetic and epigenetic diversity across a wide range of crop plants and wild relatives, which can provide us with a wealth of important information regarding the future viability of plant species in a changing environment. A combination of genetic and epigenetic inheritance of critical traits may be key to the generation of tolerant/resistant varieties to a series of newly emerging abiotic or biotic stressors in an era of ongoing climate change.

The aim of this topic is to publish new cutting-edge articles that combine the genetic structure (based on different molecular methods) and the epigenetic profile of cultivated and woody plants.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
