Deadline for manuscript submissions:

closed (20 March 2023)

Message from the Guest Editors

The coupling of glyphosate-tolerant crops with glyphosate-based herbicides worldwide is the main weed management strategy in corn, soybean, cotton, and canola. The development of herbicide-tolerant crops aimed initially at facilitating weed control and reducing herbicide use

A current strategy to cope with weed resistance is the development of crops with stacked genes for multiple herbicide tolerance. However, this strategy requires the spraying of multiple active ingredients on field. Most of these are more toxic than glyphosate. Therefore, it seems that the adoption of glyphosate-tolerant crops coupled with glyphosate-based applications does not offer a complete answer regarding weed management and sustainability.

This Special Issue aims to foster a conversation about the agronomic and environmental challenges related to the adoption of glyphosate-tolerant crops and glyphosate-based herbicide applications, and about solutions proposed to help cope with some of these new challenges.

We are pleased to invite you to contribute to this Special Issue, where original research articles, reviews, opinion pieces and mini-reviews are welcome.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
