Deadline for manuscript submissions:  
**closed (20 May 2024)**

### Message from the Guest Editor

Dear Colleagues,

Intercropping is a system where two or more crop species or genotypes are grown in the same space at the same time. Intercropping is a system that promotes ecological intensification as it increases the biodiversity of cropping systems by increasing the number of cultivated species and especially by increasing the proportion of legumes. Thus, intercropping systems received great attention during the last decade because of their advantages; however, they have significant disadvantages that makes it difficult for them to be adapted by farmers.

This Special Issue aims to promote the use of intercropping in cropping systems and invites original research, reviews, meta-analyses concerning all aspects of intercropping such as agronomy, modeling, plant physiology, genetics, and plant breeding for intercropping, weed and pest management, bioeconomy and circular agriculture, agroecology, precision agriculture, phenotyping, etc.

## Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
