submissions:

closed (31 December 2020)

Message from the Guest Editor

Dear Colleagues,

This issue will present findings on ways in which SRI concepts are being utilized in diverse environments with modified practices. such as reducing labor requirements through mechanization and improving the production and profitability of crops other than rice. Various objectives are also being served, such as enhancing crops' resilience to the stresses of climate change, reducing emissions of greenhouse gases, increasing the micronutrient content of grain, and conserving crop biodiversity. This issue will thus update understanding and application of the original ideas that constitute SRI, welcoming critical and empirical evaluations of SRI.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
