Message from the Guest Editors

Biochar has become highly popular as a soil amendment over the last decade. However, its negative environmental, agronomic and ecological impacts have also been reported. Within the 4/1000 initiative, biochar may be one of innovative technologies to increase the organic C saturation level of soils. However, where this organic C saturation level stands is not well known for different soil/climate combinations, nor is the application strategy that should be used to maximise opportunities if it can be reached sustainably.

There is increasing evidence that biochar impacts often show diminishing returns with increasing application rate, to the point of negative impacts at high rates. Repeated applications of small amounts may have different outcomes for the sustainable biochar loading capacity than one-off large applications.

Here, we aim to present a number of papers that explore the concept of the biochar loading capacity of soils to aid effective guidance of policy in this regard. We welcome manuscripts that explore how the biochar loading capacity can be determined in studies at various scales and methodologies, including experimental and modelling, con

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
