Message from the Guest Editors

Effective soil management has been accepted as essential for obtaining high crop yields. Many researchers have observed that fertility practices improving soil macro- and microbiota diversity enhances plant health and crop protection. Recent research links soil microbiota in the rhizosphere to aboveground pests and diseases, as well as pest and beneficial arthropod interactions since they can change the chemical composition of the plants, stimulating the synthesis of plant defense compounds. Soil microbiota diversity also contributes to plants overcoming climatic change. Therefore, we currently face the challenge of conserving and enhancing soil macro- and microbiota in agroecosystems.

The following topics are all welcomed:

- Practices improving soil macro- and microbiota;
- Promotion of plant defense mechanisms by soil biota;
- Endophytic fungi, and mycorrhizae, and bacteria interactions with herbivorous and beneficial insects;
- Fertilization and soil biota;
- Fertilization and pest and disease control;
- Cover crops, crop rotation, and soil biota;
- Landscape management and soil macro and microbiota;
- Soil biota and climate change tolerance.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
