Message from the Guest Editors

Dear Colleagues,

This Special Issue aims to improve the understanding of the physiological processes related to the abovementioned stress condition, also considering the interactions among different stresses in order to support the definition of proper strategies of adaptation.

We are calling for contributions that investigate the different physiological performance of tree and fruit crops in conditions affected by abiotic stresses, with special attention to the characterization of the specific environmental context in which the studies are performed.

Contributions could also consider studies devoted to the development and/or validation of field management techniques able to improve crop resilience. Papers focused on cultivar selection and agroecosystem biodiversity will also be considered.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
