Message from the Guest Editors

With the rapid growth of the global population, there is an urgent need to develop adaptive agricultural strategies to guarantee future food security without requiring additional land. Vertical farming has advantages such as intensive crop production, year-round planned production, clean and high-quality production, and labour-saving production, regardless of time and space. Therefore, the production of leafy vegetables for salads on vertical farms has already been commercialized. However, at present, vertical farming has major limitations of high initial and running costs as well as difficulties in nutrition solution management.

Therefore, relevant and updated knowledge and technologies are required for vertical farming. From academic and industrial perspectives, the role of vertical farming is becoming more and more important as a next-generation plant production system. Last year, we successfully published the Special Issue on the “Role of Vertical Farming in Modern Horticultural Crop Production—Series I.” Additionally, this year, we propose “Series II” of the same topic for a broader range of applications.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
