

Special Issue

Herbicide Resistance in Weed Management

Message from the Guest Editors

The agriculture community, farmers, and researchers are facing major challenges as our ability to secure food production for future world population is impaired by rapid environmental changes. These extensive changes directly and indirectly endanger crop yield by accelerating excessive fluctuations in weed communities and thus hastening the evolution of herbicide-resistant weed biotypes. Currently, over 500 unique cases of herbicide-resistant weeds have been reported worldwide. These weed populations cause massive yield losses and are hazardous to human health and the environment. Our ability to develop new integrated weed management practices will be one of the most important tools to combat herbicide-resistant weeds. This Special Issue will focus on various aspects of “Herbicide Resistance in Weed Management” following the keywords listed below.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
