Message from the Guest Editor

Dear Colleagues,

Big data is an important topic in the modern world. Huge amounts of data need to be processed, searched, and analyzed very quickly. Unfortunately, this is not an easy task due to the time/computational complexity, hence it is important to model and refine various techniques to help and improve big data analysis.

This Special Issue is devoted to the analysis and presentation of new algorithms in the area of big data. Papers should contain both theoretical and experimental data in order to show newer solutions in this topic.

Message from the Editor-in-Chief

Algorithms are the very core of Computer Science. The whole area has been considered from quite different perspectives, having led to the development of many sub-communities: Complexity theory (limitations), approximation or parameterized algorithms (types of problems), geometric algorithms (subject area), metaheuristics, algorithm engineering, medical imaging (applications), indicates the range of perspectives. Our journal welcomes submissions written from any of these perspectives, so that it may become a forum for exchange of ideas between the corresponding scientific subcommunities.

Author Benefits

Open Access : free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Ei Compindex, and other databases.

Journal Rank: JCR - Q2 (*Computer Science, Theory and Methods*) / CiteScore - Q1 (Numerical Analysis)
