Deadline for manuscript  
submissions:

**25 April 2025**

### Message from the Guest Editor

Over the last two decades, significant progress in the treatment of neurological pathologies has been observed, particularly regarding endovascular arterial and venous interventions, in addition to other neurosurgical procedures. This progress would not be possible without simultaneous research in the field of neuroanatomy. All invasive treatments within the central nervous system need extensive anatomical knowledge, especially regarding anatomical variability.

We invite authors who investigate neuroanatomical problems that could be applied in the clinical setting to submit their papers to this Special Issue of the journal *Anatomy*. Neuroimaging and clinical studies are especially welcome. This Special Issue will accept both original research articles and reviews. Submission of case studies describing relevant anatomical problems is also encouraged.
