Message from the Guest Editors

Equine emergency medicine encompasses a wide range of issues, from neonatal medicine to traumatic injuries. Diagnostic procedures and therapeutic interventions for these horses often require clinicians to implement innovative ideas, modify surgical procedures on the fly, and repurpose medications used in other species to fit the unique needs of this species. As emergency therapies are often the proving ground for innovative procedures and therapies, it is important to provide a forum to disseminate new ideas. The goal of this special issue on topics in equine emergency medicine is to provide a place for discussion of these new thoughts and ideas, to move forward with cutting edge therapies for our equine patients.
