### Message from the Guest Editors

Dear Colleagues,

Feed safety was defined as protecting both animals and the people that feed them from illness or injury from handling or consuming feed products. The anti-nutritional factors, mycotoxins, and heavy metals etc are widely contaminant in agricultural products, including maize, wheat, barley, peas, oily feedstuffs, and their by-products. These harmful substances are generated in natural food by the normal metabolism of plants, fungi and others, which are seriously influence the feed safety.

This special issue collects the original research and review that 1) help understanding the toxic mechanisms of the harmful substance appeared in feed on the performance, and products quality of livestock; and 2) dietary strategies to counteract the toxic effects of these harmful substance.
