Message from the Guest Editor

Dear Colleagues,

One of the key questions when considering animal welfare in farm animals is how they are killed. There are at least three main situations: (1) when animals are transported to abattoirs at the end of their productive lives. (2) when animals need to be killed due to the need to alleviate suffering in the course of a disease, disorder, or injuries. (3) when a group of animals needs to be killed due to depopulation measures preceding a crisis.

To prevent suffering to animals at the moment of killing. The aim of this Special Issue is to demonstrate both current progress and future solutions.

Original manuscripts that address any aspects under the scope of humane killing of farm animals are invited for this Special Issue. However, topics of particular interest include new or improved stunning methods,

the methods for killing under scenarios of emergency killing or depopulation, the effects of

consciousness, unconsciousness, and pain, the
