Capelles, Toulouse, France

Deadline for manuscript
submissions:

31 January 2025

Message from the Guest Editor

Zoological institutions communicate on their efforts to ensure a high quality of life for the animals under their care. They also communicate on their actions to assess, maintain, and promote animal welfare and their involvement in conservation projects. Assessing animal welfare requires studying the individuals' physiology, behaviors, and cognitions. Many institutions set up their own evaluation grids, implement enrichment programs, and ask their animal professionals to gain special training on animal behavior and welfare.

Many scientific projects on zoo animal behaviors, cognition, emotions, and welfare are conducted in zoological parks, along with scientific inquiries on the relationship between the caregivers and the animals they work with and on the interactions between visitors and animals. This Special Issue aims to give an update on what is happening today in modern zoos in terms of animal studies, animal welfare, human–animal relationships, and conservation programs.
