Message from the Guest Editors

The education of the veterinarians of tomorrow has evolved at considerable pace, in order to produce the highly skilled graduates needed to fulfill crucial roles in society. Veterinarians must care for multiple animal species, and for their human owners and society through important contributions to public health.

This special issue will consist of veterinary education research and evaluation papers, demonstrating innovative practice and evaluation of that practice, with clear underpinning theoretical foundations. Papers with student and/or practitioner authors as part of the research team are particularly encouraged, recognizing the importance of these stakeholders in the evaluation of educational interventions.
