Wildlife Translocation: Demographic, Genetic, Disease and Ethical Considerations

Guest Editors:

Dr. Graeme Coulson

School of BioSciences, The University of Melbourne, Melbourne, VIC 3010, Australia

Peter Menkhorst

Arthur Rylah Institute for Environmental Research, Department of Environment, Land, Water and Planning, Heidelberg, VIC 3084, Australia

Deadline for manuscript submissions:

closed (30 June 2023)

Message from the Guest Editors

Translocation is a growing component of wildlife management. For threatened species, translocation has been a fundamental part of reintroduction into suitable parts of their former geographic range, and is increasingly becoming part of assisted colonisation by introducing wildlife species into novel ranges in anticipation of climate change and other anthropogenic threats. Translocation is also applied to the management of exotic pests and overabundant native species, relieving pressure on their current range by relocating animals to unoccupied or more resilient habitats. Regardless of its purpose, translocation raises a number of considerations about the effectiveness. and ethical integrity of management. Among these are: source (wild or captive) of animals for release; size, demographic composition and genetic diversity of release groups; release site selection and threat mitigation; soft versus hard release protocols; demographic and genetic risks to source populations; genetic and disease risks for recipient sites; and animal welfare factors involved in capture, transport and release.

Editor-in-Chief

Prof. Dr. Clive J. C. Phillips

1. Institute of Veterinary Medicine and Animal Sciences, Estonian University of Life Sciences, Kreutzwaldi 1, 51014 Tartu, Estonia

2. Curtin University Sustainability Policy (CUSP) Institute, Kent St., Bentley 6102, Australia

Message from the Editor-in-Chief

Animals is an on-line open access journal that was first published in 2011. Animals adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues in the many varied disciplines that involve animals, with a focus on animal science, animal welfare and animal ethics. Animals is covered in the Science Citation Index Expanded (SCIE) in Web of Science, with the latest Impact Factor: 3.0 (2022, ranks 12 /62 (Q1) in 'Agriculture, Dairy & Animal Science'; 13/143 (Q1) in 'Veterinary Sciences'), 5-Year Impact Factor: 3.2.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases.

Journal Rank: JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)
