Message from the Guest Editors

Dear Colleagues,

Proper nutrition is one of the main objectives to ensure the well-being and good performance of horses. It influences the growth, reproduction, performance capacity, and health of the horse. Horse feeding is challenging for many horse owners as well as horse trainers and breeders. Many horses suffer from overweight as well as many diseases associated with nutrition. Further, other management issues, including stable and environmental conditions and feeding systems, have a major impact on the health and well-being of horses. Vice versa, horses' management influences their environment. In addition, there are many innovations in horse feeding and management. The aim of this Special Issue is to publish original research papers or reviews concerning horse nutrition and management (including all breeds and different purposes and horse categories), and the interrelations between management, nutrition, health, wellbeing, and environment.

We invite you to share your recent findings through this Special Issue.
