### Message from the Guest Editor

Dear Colleagues,

Urinary tract infections (UTIs) are a common and uncomfortable condition that affects millions of people worldwide. UTIs can range from mild discomfort to severe complications if left untreated. To diagnose a UTI, healthcare providers typically perform a physical examination and request a urine sample for analysis. This analysis involves a urine culture and sensitivity test, which identifies the type of bacteria causing the infection and determines the most effective antibiotic treatment. Prompt and accurate detection is crucial in initiating timely treatment and preventing complications.

The selection of an appropriate antibiotic for UTI treatment is based on several factors, including the type of bacteria identified, its susceptibility to different antibiotics, the patient's medical history, and any potential allergies. UTI treatment with antibiotics typically lasts from three to seven days, depending on the severity of the infection and the prescribed medication. The present Special Issue is focused both on problems and new solutions related to diagnostics, exploring both clinical and pharmaceutical approaches related to UTI treatment.

## Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciples are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
