Deadline for manuscript
submissions:

31 October 2024

Message from the Guest Editor

Dear Colleagues,

In recent years, the field of infectious diseases has received more attention, and there has been a growing awareness of the challenges posed by infections in immunocompromised individuals. We invite researchers from various disciplines to contribute their research results to this Special Issue. Potential topics of interest include, but are not limited to, the following:

1. Mechanisms of susceptibility (the immunological factors contributing to increased infection risk in immunocompromised individuals);
2. Novel diagnostic approaches (advancements in diagnostic methods specifically designed for the early and accurate detection of infections in this vulnerable group);
3. Antimicrobial strategies (the efficacy and safety of antimicrobial agents in immunocompromised hosts, including considerations for drug interactions and adverse effects);
4. Preventive measures (the prophylactic approaches used to minimize infection risk in individuals undergoing immunosuppressive therapies or organ transplantation);
5. Clinical management (a discussion of experiences and best practices in the clinical management of infections, highlighting challenges and successful interventions).

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciples are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
