# The Genetic Differences among Colistin-Resistant *Enterobacterales*, *Acinetobacter* spp. and *Pseudomonas aeruginosa*

Guest Editors:

#### **Dr. Spyros Pournaras**

Clinical Microbiology Laboratory, Attikon General University Hospital of Athens, Athens, Greece

#### Prof. Dr. Raffaele Zarrilli

Department of Public Health, University of Naples Federico II, Naples, Italy

#### Prof. Dr. Katy Jeannot

Department of Bacteriology, University Hospital of Besançon, Besançon, France

Deadline for manuscript submissions: closed (31 March 2023)

### **Message from the Guest Editors**

Colistin is one of the few remaining antimicrobials able to be used as last resort against severe infections caused by Enterobacterales, Acinetobacter spp. and Pseudomonas aeruginosa. This Special Issue will focus on these bacteria. The aim is to present original research or review manuscripts dealing with different aspects of colistin resistance: molecular epidemiology and dissemination of colistin-resistant pathogens; molecular mechanisms of resistance and genetic acquisition; diagnostics; antimicrobial regimen-antimicrobial therapy. Particular consideration will be given to transdisciplinary research focused on the development of molecular, cellular, microbiological, computational and epidemiological approaches to addressing pathogen drug resistance. Studies assessing interactions among multi- and pan-drug resistance phenotypes and their genetic basis are encouraged, along with those examining the genomic and evolutionary context of mobilized, amplified or rearranged drug resistance genes. Lastly, papers bridging molecular surveillance of genetic diagnostics and elements associated with drug resistance would be appreciated.

## Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supragovernmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciples are all key. Antibiotics is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics )
