

Special Issue

Mechanics, Design, and Manufacture of Soft Lattices

Message from the Guest Editor

Soft lattices are fast emerging as an attractive choice for the design of flexible structures at both mesoscale (e.g., shoes, helmets) and microscale (e.g., auxetic metamaterials) due to their high porosity, light weight, and tailorable material properties such as stiffness and density. These properties make the use of soft lattices desirable in biomedical applications, soft robots, and energy-absorbing devices. Novel design and manufacturing approaches are needed for easy and efficient fabrication of multimaterial and multifunctional soft lattice structures. Simultaneously, developing effective modeling and simulation strategies for the analysis of soft lattice mechanics is also challenging due to the: 1) multiple length scales involved and 2) complex nonlinear behavior arising from finite deformations, hyper-elastic material response, and instabilities, such as buckling. We invite high-quality original articles that focus on tackling these challenges for this Special Issue on the design, analysis, and manufacture of soft lattice structures.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Magd Abdel Wahab

Laboratory Soete, Faculty of Engineering and Architecture, Ghent University, Technologiepark Zwijnaarde 903, B-9052 Zwijnaarde, Belgium

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.4 days after submission; acceptance to publication is undertaken in 7.7 days (median values for papers published in this journal in the first half of 2024).
