Message from the Guest Editors

Dear Colleagues,

The application of non-conventional technologies in the processing of vegetable food products seeks to respond to consumers' needs and desires. There is an increasing demand for foods with distinct characteristics and of superior quality that are also safe, highly nutritious, and minimally processed. Furthermore, it is necessary to apply the principles of a circular economy by reducing waste and valuing the by-products generated via processing through the development of new products and new applications.

Thus, non-conventional technologies aim to obtain products that preserve, or do not negatively alter, the physical–chemical, biological, and sensory characteristics of foods. Food safety, and the economic viability of the applied technologies and products obtained, are equally valued topics.

Special attention will be paid to the following topics:

High hydrostatic pressures; Supercritical fluids; Ultrasounds; Atmospheric cold plasma; Ultraviolet radiation; Irradiation; Microwaves; Joule heating and pulsed electric fields; Intelligent packaging/active packaging.

da Vinci 32, 20133 Milano, Italy

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
