Message from the Guest Editors

Dear Colleagues,

Pavements are an important component of highways, airports, and ports. The evaluation of pavement performance is crucial for assessing its ability to support traffic over time and to determine maintenance and rehabilitation strategies. Moreover, materials performance evaluation seeks to advance the technology and tools used for the evaluation, testing, specification, mixture proportioning, and optimization of the materials used in the construction, preservation, maintenance, and rehabilitation of highways. There are a broad range of paving materials, including traditional materials—asphalt, Portland cement concrete, and aggregate—as well as recycled, reused, new, or innovative materials.

We invite researchers from across the world to contribute original research articles as well as review articles on the evaluation of pavement and materials performance.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
