

## From Fundamental Research to Application of Bio-Inspired, Bio-Hybrid, and Soft Robotics

Guest Editors:

**Dr. Shunsuke Shigaki**

Principles of Informatics  
Research Division, National  
Institute of Informatics, 2-1-2  
Hitotsubashi, Chiyoda-ku, Tokyo  
101-8430, Japan

**Prof. Dr. Daisuke Kurabayashi**

Department of Systems and  
Control Engineering, Tokyo  
Institute of Technology, 2-12-1  
Ookayama, Meguro-ku, Tokyo  
152-8552, Japan

Deadline for manuscript  
submissions:

**20 November 2024**

### Message from the Guest Editors

Organisms have an excellent balance of intelligence and body, and are excellent in adaptability and robustness. Robotic systems that can behave like living organisms have been developed for many years. Among these robotic research, it has focused on mimicking the body structure of living organisms, modeling the intelligence of living organisms, and using biological materials as robotic components. In recent years, attention has been paid to the field of soft robotics, in which the robotic body is composed of soft materials. The biological experimental techniques and system design theories that support these fields are important for the next generation of robotics and should be recognized by researchers in a wide range of fields. The purpose of this Special Issue is to introduce the latest research in the areas of bio-inspired robotics, bio-hybrid robotics, and soft robotics. Because these areas are at the interface between science and engineering, we welcome submissions on a wide range of topics such as neuroethology, cyborg technology, and soft sensors.

an Open Access Journal by MDPI

## Editor-in-Chief

**Prof. Dr. Giulio Nicola Cerullo**

Politecnico di Milano, Piazza L.  
da Vinci 32, 20133 Milano, Italy

## Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
