20 January 2025

Message from the Guest Editors

Dear Colleagues,

Pollution control and environmental remediation refers to using physical, chemical, or biological technologies to reduce the concentration and toxicity of pollutants in the environment, or to make them completely harmless. The environmental pollution remediation process includes adsorption, the oxidation/reduction process, biodegradation, and so on. Its objects include atmosphere, water, soil, and solid waste.

This Special Issue on “Pollution Control and Environmental Remediation” seeks high-quality works, including research or review papers focused on the latest technologies, methods, and materials for the remediation process of atmosphere, water, and soil pollution, etc. Topics of interest include, but are not limited to, the following:

- Emerging contaminants control;
- Physical, chemical, and biological remediation methods and technologies;
- Environmental technology and materials;
- Atmosphere/water/soil remediation;
- Other related topics.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
