Artificial Intelligence Applications in Mining and Mineral Processing

Guest Editor:

Prof. Dr. Deqiang Cheng
School of Information and Control Engineering, China University of Mining and Technology, Xuzhou 221116, China

Deadline for manuscript submissions:
20 October 2024

Message from the Guest Editor

This Special Issue, entitled "Artificial Intelligence Applications in Mining and Mineral Processing", focuses on presenting research into image-based or video-based AI techniques used in mines. Our objective is to establish effective communication between AI researchers and the intelligent mining community, push forward applications of AI-driven machine vision techniques for intelligent mining, present research articles and encourage discussions centered around the utilization of artificial intelligence techniques in mining and mineral processing. In particular, this includes methods of image super-resolution reconstruction for the degraded images of mine roadways with special lighting and dust environments, unsupervised cross-view re-recognition methods for the weak characteristic personnel in the mine roadways with complex backgrounds, identification methods and lightweight recognition models for safety hazards in the key production scenes of mines, and the three-dimensional virtual reconstruction technology of mining scenes based on video content analysis and real-time control data and image-based particle shape measurement of pulverized coal.

Special Issue

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.
Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
