Message from the Guest Editors

Dear Colleagues,

Unmanned systems can complete specific missions without human participation, and play an important role in military and economy. It can not only implement disaster relief, specifically self-driving, but can also display skills in electronic jamming, air defense suppression, air confrontation, and other aspects. Improvements in the intelligence level play a crucial role in improving the efficiency of unmanned system. Some problems are important for the development of intelligent unmanned systems, such as modelling, sensing, and control.

Despite decades of development, intelligent unmanned system technology still faces challenges in theory and practice. In this context, this Special Issue aims to collect and report the latest developments in intelligent unmanned system technology and application. Reviews and original research articles are very welcome. We look forward to your active participation in this Special Issue.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica,
Politecnico di Milano, Piazza L.
da Vinci 32, 20133 Milano, Italy

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
