

New Advance of Acoustic Emission and Microseismic Monitoring Technologies in Civil Engineering

Guest Editors:

Prof. Dr. Giuseppe Lacidogna

Department of Structural, Geotechnical and Building Engineering, Politecnico di Torino, Corso Duca degli Abruzzi 24, 10129 Turin, Italy

Prof. Dr. Sanichiro Yoshida

Department of Chemistry and Physics, Southeastern Louisiana University, SLU 10878, Hammond, LA 70402, USA

Dr. Guang-Liang Feng

Institute of Rock and Soil Mechanics, Chinese Academy of Sciences, Wuhan 430071, China

Deadline for manuscript submissions:

closed (31 October 2021)

Message from the Guest Editors

Acoustic emission (AE) and microseismic (MS) monitoring technologies have been successfully applied to material performance analysis, material detection, building and rockmass structure stability, and early warning in civil engineering. They have played an important role in safety operation of road engineering, bridge and railway engineering, tunnel and underground, water conservancy, and mining engineering. Original research articles and review articles in health and stability monitoring of civil engineering are especially welcomed.

Potential topics include but are not limited to the following:

- Installation and arrangement of AE/MS sensors;
- Analysis of AE/MS signals;
- AE/MS source location;
- Novel algorithms for data analysis for AE and MS signals;
- Focal mechanism of fracture based on AE/MS signals;
- Health and stability monitoring of civil engineering;
- AE/MS activity characteristics in disaster development process of civil engineering;
- Building and rockmass stability analysis and warning based on AE/MS information;
- Application of AE/MS monitoring technology in new area of civil engineering.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica,
Politecnico di Milano, Piazza L.
da Vinci 32, 20133 Milano, Italy

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
