Message from the Guest Editors

Dear Colleagues,

In recent years, there has been rapid progress in the development and application of underground space, such as roadways, tunnels, and underground chambers. Bolt shotcrete support is one of the important means to maintain the stability and integrity of roadways. Advanced support technology (including shotcrete material, theory, and equipment) are important means to ensure the safe and efficient application of roadways. In the process of underground space development, extreme geological conditions such as high ground stress and high temperature can easily cause rock burst, high-temperature heat damage, and harmful gas outburst. There has been substantial research into support technology for roadways. For example, spraying steel fiber-reinforced concrete technology to prevent roadway cracking.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica,
Politecnico di Milano, Piazza L.
da Vinci 32, 20133 Milano, Italy

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
