Message from the Guest Editor

Dear Colleagues,

Dye-sensitized solar cells (DSC) continue to represent an interesting area of photovoltaic research, with features making them attractive to both researchers and for large scale manufacturing. In recent years, a more radical re-thinking of the architecture has seen substantial progress in champion device efficiencies. At the same time, the inter-related nature of the device means that each of these developments re-opens the door for further developments in other components.

The photoanode is of course of the most frequently researched topics within the DSC field, yet there continue to be new developments in terms of materials and morphology as well as characterization and understanding. This Special Issue will cover some of these recent developments, highlighting the future prospects of the technology platform.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo

Politecnico di Milano, Piazza L.
da Vinci 32, 20133 Milano, Italy

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
