Message from the Guest Editors

Dear Colleagues,

The urgency of finding new antimicrobial drugs is obvious if we consider the 10 million premature deaths estimated by 2050 due to antibiotic resistances (AMR) [O'Neill, J. 2014].

Antimicrobial peptides (AMPs) have appeared as an alternative to the commonly used antibiotics due to their antimicrobial, antifungal, and antiviral activities. Widening the knowledge in this field could have a big impact on the AMR issue.

The aim of this Special Issue is to gather scientific articles (research articles, review articles, as well as short communications) related to:

- New natural AMPs with special properties (e.g. immunomodulatory properties, prevention of the biofilm formation, prevention of post-surgical adhesion);
- AMPs designed using knowledge of natural AMPs (structure-based, AMP libraries, selective AMPs);
- Mechanisms of action of AMPs (molecular targets of AMPs, mechanism of membrane disruption);
- Potential clinical applications of AMPs.

an Open Access Journal by MDPI

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica,
Politecnico di Milano, Piazza L.
da Vinci 32, 20133 Milano, Italy

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
