Message from the Guest Editors

Dear Colleagues,

During the past 20 years, advances in basic science related to biology of tooth movements, and clinical trials on prevention and treatment of malocclusions, have dramatically changed especially with the introduction of new technologies and materials. Moreover, orthodontic diagnosis and treatment planning improved thanks to the introduction of CBCT (Cone Beam Computed Tomography) and of intra and extraoral scanners.

The purpose of the present **Special Issue** is to collect the scientific literature on the most recent technique that may help orthodontists to improve diagnosis, treatment planning, clinical management, and retention of their young and adult patients in whom different malocclusions are present.

In order to achieve these objectives, researchers and experts in the field are invited to present their clinical studies regarding these specific topics as well as reviews of the literature (narrative reviews and systematic reviews) are welcome. Case reports and case series, involving the above topics, will also be considered.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
